Soil Vapour Implants and Weights

SVIFTS-6: Stainless steel mesh implant. 150mm long screen with barb connector at top. SVIFTSWSS Weight stainless steel (screw on) shown below.

SVIFTSWSS: Stainless steel weight, 22mm

SVPT97-6: Stainless steel mesh implant, reverse thread, 150mm long screen with barb connector at top. SVPT97B brass weightl (screw on) shown below for use with Geoprobe® rods.

Do I need a weight?

Due to the coiled teflon tube acting like a spring, it can catch on the sides of the bore. For shallow installations of a few metres, a weight may not be necessary. For deeper installations, a weight is required to pull the implant down to the bottom.

Ordering Information:

EC873301	Red push on cap
SVK1B	Sealing cap with push on fitting, dust cap included
R2003-0402	1/8" male thread push on fitting
SLB400C	Swagelok fitting for direct connection to Summa Cannister
TT33-15	Teflon tubing, 1/4" OD, 15m long, clear (or TT33.7-60 for 60m roll)
Nondo Mini	Mini Nondo well cover, cast iron, bolt down lid, flush mount, 150mm OD
SVIFTS-6	Soil vapour implant, 150mm screened mesh, stainless steel, with 1/4" barb (or SVPT95-6: reverse threaded for Geoprobe® tooling)
SVIFTSWSS	Stainless Steel weight for SVIFTS-6 soil vapour implant, 22mm
